Education

Georgia Institute of Technology, Atlanta, Georgia

August 2018-May 2021

School of Civil and Environmental Engineering

GPA: 3.31

Bachelor of Science in Civil Engineering

Work Experience

NoTraffic, Atlanta, Georgia

Signal Optimization Engineer

November 2024-Present

- Lead deployment and optimization of NoTraffic adaptive signal control algorithms across major municipalities including Phoenix, Topeka, Missouri City, Naples, and Montreal.
- Configured adaptive signal control deployments across national corridors reducing intersection delay by up to 30% and producing performance analytics reports for municipal agencies.
- Serve as the primary liaison between the R&D team in Israel and U.S. field operations as the lead product engineer to translate traffic engineering requirements into actionable product improvements.
- Manage and maintain 60+ signalized intersections nationwide using the NoTraffic adaptive control platform, providing system monitoring, troubleshooting, agency training, and technical sales support.

Q-Free ASA, Atlanta, Georgia

Support Engineer

November 2021-November 2024

- Led product evaluation and system design for the Q-Free Urban traffic management platform, supporting statewide deployments for Georgia DOT and North Carolina DOT.
- Delivered technical sales presentations and product demonstrations to public agencies, contributing to statewide deployment of controller management software used by North Carolina DOT.
- Directed User Acceptance Testing (UAT) for major deployments including City of Laval, City of Dallas, Texas, and the North Carolina DOT, improving testing workflows and accelerating implementation timelines.
- Served as engineering lead, deploying adaptive traffic control systems in city of Boulder, Colorado and Conway, Arkansas.

Kimley-Horn, Atlanta, Georgia

Civil Engineering Analyst

June 2021-November 2021

- Performed traffic impact studies for municipalities in the state of Georgia, evaluating traffic operations and recommending mitigation strategies to improve safety and mobility.
- Analyzed traffic flow and congestion patterns using Excel, Python, and MySQL, leading to increased traffic flow, and reduced greenhouse gas emissions.

HNTB, Atlanta, Georgia

Traffic Engineering Intern

May 2019-May 2020

- Developed ITS and traffic signal design plans using AutoCAD, MicroStation, and Civil 3D for transportation infrastructure projects in Gwinnett County.

Skills

- **Programming & Scripting:** Python, Bash
- **Cloud & Infrastructure:** Microsoft Azure, Kubernetes, CI/CD (Jenkins), Linux (Ubuntu)
- **Databases:** PostgreSQL, MySQL
- **Languages:** Portuguese (Native), Spanish (Fluent)
